

Catawba County Doesn't Need a Sales Tax Increase

October 2, 2007

.....

the Catawba County commissioners are asking voters to approve a quarter-cent sales tax increase on November 6. If approved, this new tax is estimated to increase county revenues the first full year by over \$4.9 million (FY 2008-09).¹

In its 2007 session, the North Carolina General Assembly relieved all counties of paying the portion of Medicaid expenses that had been forced on counties, in exchange for the half-cent sales tax that the counties levied to help pay those expenses.² In addition, the legislature voted to give counties the option to ask voters to approve new tax increases. Options include increasing the sales tax, imposing a land-transfer taxes or no tax hikes at all.

This *Regional Brief* documents Catawba County's current spending and tax policies. County spending has not been properly managed or prioritized. Currently, about \$16.3 million is available to be spent on high-priority government functions, such as school construction (about \$173.1 million over 10 years) (see Appendix A).

In addition, growth has more than paid for itself. County revenues have grown 0.8 percent faster than population and inflation over the last six years (see Appendix B). Thus new residents have paid more than their fair share of county expenses. Studies that purport to show that growth does not pay for itself are fatally flawed because they only calculate the costs of new residents and ignore the revenue stream generated by those residents.³

Finally, if Catawba County tax revenues increase only as fast as population and inflation over the next 10 years, total revenues will increase 40 percent. This increase is more than adequate to pay for county needs, including new school construction. This is especially true if the county is willing to consider new and innovative ways to accommodate enrollment growth (see Appendix C).

There is plenty of money available to meet Catawba County's needs. The last thing the county needs is a tax increase. Instead, county voters must demand that county officials institute better financial management and establish better spending priorities.

Medicaid Swap. The state is taking the over the county portion

of Medicaid over three years, but is also taking a portion of revenues from counties, too. The legislature included a “hold harmless” provision to guarantee that each county ends up with at least \$500,000 more available in its budget.⁴ Because Catawba County’s net Medicaid savings were more than the \$500,000 “hold harmless” amount, the county gains at least \$509,941 in additional funds to spend each fiscal year, including the current year, which started in July.

Per-Capita Revenue Increases. From 2001 to 2006, Catawba County’s per-capita revenues have increased by 0.8 percent after adjusting for inflation⁵ (see Appendix B). This means that new county residents are contributing more than their fair share of county revenues. In other words, population growth has been “paying for itself” because real county revenues are growing at a faster rate than population. In addition, if the county had lived within its means — that is, if its budget increases had been kept in line with population and inflation increases, rather than exceeded them — over the last six years, the county’s 2006 revenues could be about nearly \$4.5 million less. That amount could and should be returned to the taxpayers in the form of tax cuts.

Student Enrollment Growth. According to projections by the N.C. Department of Public Instruction, Catawba County will experience over the next 10 years a total enrollment growth of 1,183 public-school students, which would represent a 6.7 percent increase (about 0.7 percent per year). The county will receive an estimated \$77.7 million in capital funding from state, local, and lottery sources during the next 9 years (about \$8.6 million per year average).⁶

In order to stretch those dollars to handle the expected growth, the county should consider these options, which would dramatically increase school capacity at minimal cost (see Appendix C for details):

1. Charter schools
2. Ninth-grade centers
3. Public/private partnerships

4. Adaptive reuse
5. Satellite campuses
6. Virtual schools

Unfortunately, taxpayers often react by giving school districts a blank check without sufficiently scrutinizing the district’s long-term capital plan or holding them accountable for their spending. When taxpayers give school districts license to raise taxes for unchecked spending year after year, school leaders feel a sense of entitlement for more of the taxpayer’s money. Lacking accountability, counties turn to more frequent tax increases, even though the additional money has not improved student performance or the district’s management of student enrollment growth.

Economic Incentive Giveaways. Catawba County has given about \$8.1 million in economic incentives to businesses and corporations from 2004 to 2006.⁷ Giving large corporations economic incentives, also known as corporate welfare or corporate socialism, is taking much-needed money from county taxpayers and local small businesses and giving it to large corporations in exchange for promises of creating new jobs. Often the promised jobs go to outsiders. The long-term impact of these incentives on economic growth is questionable, to say the least. It is a poor investment of taxpayers’ money.

CONCLUSION

Catawba County faces a crisis, but it is not a funding crisis. The county has about \$16.3 million over and above its base budget to meet its needs (see Appendix A). A sales tax increase at this time would only encourage more wasteful and inefficient spending. County voters need to demand that the county live *within the means of the taxpayer*. Continuing on the current path will not meet the real needs of county residents.

Appendix A: Projected Catawba County Revenue Gains

Revenue Gains	1 year	10 years
Gain from Medicaid swap (FY 2008)	\$509,941	\$14,885,049
Estimated school capital (Avg based on projections)	\$8,628,630	\$86,286,300
Potential Savings		
Eliminate economic incentive giveaways (2004-2006 Avg)	\$2,701,966	\$27,019,660
Revenue Growth		
Revenue in excess of population and inflation (FY2006)	\$4,490,115	\$44,901,150
TOTAL	\$16,330,652	\$173,092,159
<hr/>		
Potential extra availability	\$16,330,652	\$173,092,159
<hr/>		
Revenue from Sales Tax Increase	\$4,942,948	\$55,354,777

Appendix C: Alternative Options to Handle Enrollment Growth

Without a doubt, growing school districts require funds to build and renovate facilities that accommodate school enrollment increases. Nevertheless, tax increases and restrictive regulations will not solve the long-term problems of planning and expanding school facilities. School districts throughout North Carolina can manage enrollment growth using proven, cost-efficient solutions that do not burden county taxpayers and that enhance educational opportunities for students.

1. CHARTER SCHOOLS (NET CAPACITY GAIN: 37-1,075 SEATS PER SCHOOL)

A handful of charter-school vacancies are available each year, giving a group of citizens the opportunity to launch a new charter school in the county. The average charter school in North Carolina enrolls 322 students, but charter schools have a wide range of student enrollments, from 37 students enrolled in Grandfather Academy (Avery County) to 1,075 students enrolled in Franklin Academy (Wake County).

Depending on the mission and grade range of the school, a charter school can absorb hundreds of students upon opening. Additionally, the charter schools could continue to grow, increasing enrollment by as much as 10 percent per year.

2. NINTH-GRADE CENTERS (NET CAPACITY GAIN: 200-400 SEATS)

A ninth-grade center is a small, sometimes autonomous school that separates ninth-grade students from their high-school classmates for much (or all) of the school day. A number of urban and suburban school systems in North Carolina have created separate learning environments for their ninth-grade students by housing them in mobile units, modular schools, adaptive reuse buildings, or classroom additions.

A ninth-grade center is an effective way to increase capacity at a high school as well as ease students' difficult transition from middle school to high school. Statewide dropout sta-

tistics reveal that 5.3 percent of ninth graders in the class of 2006 dropped out, while 14.2 percent of ninth graders that year were held back at the end of the year.

If properly designed, ninth-grade centers can reduce the number of students who are required to repeat ninth grade or who drop out. Capacity savings is dependent on the size of ninth-grade class of the particular high school served.

3. PUBLIC/PRIVATE PARTNERSHIP

Session Law 2006-232 of the North Carolina General Assembly permits school systems to enter into capital or build-to-suit leases with a private developer. According to the law, "Local boards of education may enter into capital leases of real or personal property for use as school buildings or school facilities. The capital lease may relate to an existing building or a new school building to be constructed. The term of any capital lease, including any renewal periods, shall not exceed 40 years from the expected date that the local board of education will take occupancy of the property that is the subject of a capital lease."

Public/private partnerships are well suited for the construction of elementary schools in growing areas. Developers are eager to enter into public/private partnerships to build elementary schools in growing areas because they raise the value and desirability of the homes and properties located within.

4. ADAPTIVE REUSE

As a way to save time and money, school systems have converted vacant commercial buildings into schools. Wake County Schools completed an adaptive-reuse project in 1997, converting the American Sterilizer Company building into the Lufkin Road Middle School. The school system is currently adapting two other commercial buildings into schools, including a former Winn-Dixie grocery store.

5. SATELLITE CAMPUSES

Satellite campuses are small, off-site schools

that utilize vacant space in neighborhood buildings. They are an outstanding way to enhance vocational, technical, and career education.

For example, a school system in New Hampshire wanted to expand its vocational and business programs but could not afford to construct a new building for them. Its solution was to find vacant spaces in the community for satellite campuses. The school district rented an empty furniture store, shared space with a local business, and converted extra space at a bank for its technology program. Vocational and business teachers were able to combine classroom instruction with an on-site demonstration of its practical application.

6. VIRTUAL SCHOOLS

A virtual school is an Internet-based learning environment that allows students to participate in a class using a computer rather than being present in a school classroom. Contrary to popular perceptions, virtual schools are rigorous academic institutions that exceed state curriculum standards. Students can access all class materials, including lectures, notes, assignments, and handouts, through the Internet. Students can also access audio and video content not available to those in traditional classrooms. Certified teachers offer one-on-one communication with the student, and they often recruit experts in the subject area to interact with virtual-school students through interactive lectures and online chats.
